

DUDGEON POINT EIS

Sediment investigations

Ports and Coastal Environmental was commissioned by WorleyParsons to conduct sampling within Half Tide Tug Harbour and the proposed alignment of several port options at the proposed Dudgeon Point Port. These works were conducted as part of broader environmental assessments supporting the EIS process. PaCE conducted Vibrocore sampling to 3m. PaCE provided on-vessel supervision and on-shore processing of samples. This included screening for acid sulphate soils and preparation of laboratory samples for dispatch to the analysing laboratories.

Results were reported according to the NAGD (2009).
